

# Linux Application Suite (LAS)

## User / Tester short paper

by Felix Caffier (broozar@web.de) draft 2015-03-30

## Content

1. Installation of LAS tools
2. File system and user/group changes

## 1. Installation of LAS tools

1. Chmod all binaries inside BUILD-x86\_64 (or BUILD-i686, depending on your OS) to **755**
2. Copy all those binaries into **/usr/bin**:  

```
$> sudo cp /path/to/BUILD-x86_64/* /usr/bin/
```

## 2. file system and user/group changes

1. Create a new system user **appmin** and give him a password:  

```
$> sudo useradd --system appmin  
$> sudo passwd appmin
```
2. Create a new system group **apps** and add yourself to the group:  

```
$> sudo groupadd -r apps  
$> sudo usermod -a -G apps username
```
3. Create a new folder **/app** and set user, group and permissions:  

```
$> sudo mkdir /app  
$> sudo chown appmin:apps /app  
$> sudo chmod 750 /app
```
4. Create a symbolic link to **/app** in your **/home** folder with a name of your choice:  

```
$> ln -s /app /home/username/Aplicaciones
```
